

A TOASTER IN A DRAWER

Ritter has no need to hide its built-in kitchen systems inside drawers, but it has because space is becoming more and more precious in modern kitchens. So in order to keep the space on the work-top free, Ritter came up with the space-saving idea of installing kitchen appliances inside kitchen drawers, more than 40 years ago. At a height of 75mm, the built-in toaster ET 10 fits into standard 30cm-wide drawers. Slim with an elongated-slot, it toasts two slices of bread at the same time and includes automatic toast centering. It has other functions including a defrost setting for frozen bread, and the immediate interruption of the toasting process by pressing the stop button. ■
