

Built-in Bread Bin EBT with Preserving Lid for installation in floor cabinets

ritter Built-in Bread Bin

with Preserving Lid

for installation in floor cabinets with at least 40 cm cabinet width (with 16 mm cabinet wall thickness) and 225 mm inner height

EBT, the professional built-in solution for bread storage, is a useful supplement to the ritter built-in multislicer!

As its lid is firmly fixed to the floor cabinet, the bread bin will open automatically whenever the drawer is being opened.

Bread: The ritter earthenware built-in bread bin with preserving lid ensures that the bread is stored correctly. Here it experiences a significantly slower ageing process with complete development of the bread's own flavours.

Water: The bread's dissipated moisture is absorbed into the unglazed part of the earthenware lid and as the moisture level drops it returns to the bread. The food-safe glazing of the bread bin prevents the bread moisture from evaporating. Thus, the bread is being protected from early drying.

Air: Bread needs oxygen for its natural ageing process. The air holes on both sides of the bread bin enable the necessary air to circulate so the bread does not „suffocate“.

Temperature: In order to keep the bread temperature at a constant level, the bread bin is made of earthenware. This material perfectly equalizes variations in temperature and therefore ensures that the bread is stored biologically correct.

Dimensions height: 225 mm, width: 360 mm, depth: 460 mm
weight approx. 10 kg

Warranty 2 years, product made in Germany

Item No. / GTIN 600.015 / 4004822 60015 4
