

**MADE IN
GERMANY**

Cordless hand blender stilo⁷ selected design

Details

- cordless, battery-operated hand blender
- full metal construction
- LED battery level indicator
- three speed settings
- two-finger switch-on safety system
- automatic safety shut-off in case of overloading or overheating
- universal cutter made of stainless steel: used to blend most foods
- blending cup made of plastic
- warranty: 2 years*
- product made in Germany

Technical features

- Plug-in power supply unit for charging station: input voltage 100-240 V
- Lithium-ion-battery: 7.2 V; 2.1 Ah
- TÜV-Rheinland/GS, CE
- Hand blender incl. charging station: width 15.0 cm height 44.0 cm depth 15.5 cm
- weight: 1.7 kg
- Hand blender: width 6.0 cm height 42.0 cm depth 7.0 cm
- weight: 1.0 kg

Cordless hand blender stilo⁷ the cordless one

The new stilo⁷ hand blender guarantees absolute freedom in the kitchen with its cordless design. The lithium ion battery's operating time depends on the respective kind of food that needs to be cut. It lasts about 20 minutes while puréeing liquid or creamy foods like soups and about 15 minutes while chopping raw vegetables or while preparing doughs. The hand blender is kept in its own charging station – that way, it is always ready to hand and is recharged automatically after every use as soon as it is put away. ritterwerk has equipped their hand blender with a lithium ion battery that is gently and slowly charged without being overcharged thanks to its intelligent charging technology. This charging technology ensures a longer battery life. After use, simply put the stilo⁷ into the charging station and keep an eye on the LED indicator signalling the battery charging status.

As with all ritter products, stilo⁷ is made in Germany and provides great material quality. The pins at the blender keep the food you want to chop in place in order to guarantee ideal results. The mixer unit has an open shape to prevent clogging when chopping hard foods. The simple operation of the stilo⁷ hand blender with the tried-and-tested two-finger safety switch-on technology prevents accidental switch-on and guarantees safety. The hand blender can only be activated by pressing both buttons and becomes inactive if one of the buttons is released. The overload protection feature protects the motor and automatically switches the device off in case of overheating or blocking of the blade.

In order to be able to cope with a very wide range of foods, there is the universal cutter as the standard attachment for chopping up and puréeing of most foods. Optimal processing is achieved in the blending cup made of plastic because it is ideally suitable with its tall, narrow shape. It is also possible to use a shallow, wide container, though. In addition, the hand blender can work at three different speed settings. For the cordless hand blender stilo⁷, there is a whipping disk, a stirring disk, a cutting knife and another blending cup made of stainless steel available for delivery as optional accessories. The attachments are suitable for dishwashers, but this may cause the blades to become blunt.
