

**MADE IN
GERMANY**

Coffee machine piona⁵ selected design

Details

- coffee machine for 8 cups à 125 ml
- filter size 4
- housing made of high-quality plastic
- thermal jug with shatter-proof stainless steel vacuum cylinder
- thermal jug with an extended heat-keeping function can also be used as a serving jug
- rotatable and removable filter holder with drip stop and overflow protection
- energy-saving eco brewing process: boiler is located right underneath the water tank, which leads to reduced temperature losses
- automatic switch-off straight after the brewing process of the desired number of cups
- 0-watt standby mode
- automatic calcification stop function: device switches off automatically in the event of calcification
- illuminated eco switch
- five rubber feet to prevent slipping
- warranty: 2 years*
- product made in Germany

Technical features

- 220 – 240 Volt, 650 – 800 Watt
- VDE / GS, safety category 1, CE
- width 17.5 cm height: 43.5 cm depth 22.0 cm
- weight: 3.0 kg

Item-No. / GTIN

black: 640.013 / 40 04822 64013 6
white: 640.014 / 40 04822 64014 3
red: 640.015 / 40 04822 64015 0

PU / PU-GTIN

black: 2 / 40 04822 00039 8
white: 2 / 40 04822 00040 4
red: 2 / 40 04822 00041 1

Subject to change without notice.

*The 2-year manufacturer's warranty applies to all devices sold within the European Union. Your legal warranty claims according to § 437 ff. BGB (German Civil Code) remain unaffected by this regulation. You can view the warranty conditions at <https://www.ritterwerk.de/warranty>.

Coffee machine pilona⁵ Energy-saving and elegant

The ritter coffee machine not only looks great, but it also captivates with its innovative Eco technologies. During daily use and in comparison with conventional filter coffee machines, it helps to save energy and therefore save money while protecting the environment. On this basis, for instance, the pilona⁵ switches automatically onto the 0 Watt standby mode subsequent to the brewing process.

On the pilona⁵ the water tank is situated above the brewing unit, which leads to energy efficiency. This sophisticated design results in further practical advantages: The coffee machine operates almost silently and due to the minimum losses in temperature, achieves an optimum brewing temperature. Having this short water distance means that fresh water combines coffee powder at the start of every brewing sequence and not leftover water from the previous brewing sequence – which guarantees perfectly brewed coffee without any compromises. In addition, the machine emits significantly less steam, protecting the surrounding kitchen cupboards.

Calcified heating elements in the device often mean that the system will use a lot more energy attempting to reach the necessary brewing temperature. This wastes electricity, causing high levels of stress and therefore the premature wear of the heating element. With an automatic calcification stop function, the pilona⁵ prevents this, and will stop the brewing sequence as soon as the coffee machine no longer works efficiently due to calcification or if there is a risk of damage to the heating element. At the same time, the pilona⁵ has also been deliberately designed without an energy-consuming, electronic calcification display unit.

A little carelessness when using a glass coffee pot can easily lead to a crack. With the pilona⁵ thermal jug, this can no longer occur, since its interior consists of a break-proof stainless steel cylinder. This is surrounded by a vacuum which ensures that the coffee stays hot for a long time. The thermally insulated exterior housing also prevents unpleasant burning accidents. The thermal jug is ideally suited as an elegant tabletop serving jug. With its sharp finish, its spout prevents bothersome dripping after pouring, which helps to prevent unwanted coffee stains.

The pilona⁵ works on an especially energy-saving basis, consistently achieves an optimally adapted brewing temperature, and with its elegant appearance it also looks great in every kitchen. With its illuminated switch which indicates whether the coffee machine is in use, nothing can stand in the way of safe coffee brewing. Together with the incomparably slim merido⁵ toaster and the energy-saving cavita⁵ kettle, the colour-coordinated breakfast set is complete – all of them of course „made in Germany“.
